versatile performance

total drama solutions

Creating the setting for complete performance and utilising over forty years experience in the field, Stage Systems has evolved from simply supplying staging, to designing total drama solutions.

From portable sound and light kits to a unique service that is individual to each project, Stage Systems can ensure effective use of any space and create an amazing performance environment. Services include consultation, creating designs and solutions, delivering and installing products plus training and project managing the entire development.

product solution ideas

Through the integration of concepts, equipment and facilities Total Drama Solutions can develop the perfect mixture of products to make intelligent and full use of space, creating scope, adaptable solutions and flexibility for a whole variety of fun activities.

TRANSFORMING SPACE.

Remodelling a large space can change its purpose from a basic school dining room into a fully automated theatre. Using retractable seating and demountable staging, plus ceiling mounted lighting and speakers, a hall can be adapted to present dramatic performance as well as serve lunch.

CREATE CONTROL.

Utilising small spaces can create a room to control lighting, sound and AV, with computerised or manual control desks and a view over the auditorium giving command to produce full dramatic effects.

DEVELOP PERFORMANCE.

Developing a drama studio or music room to utilise light or dark to create space with atmosphere, can enhance the teaching or performance facility with the use of blackout curtains, light and sound facilities for dramatic effects and modular staging to give portability and versatile usage options.

service solution initiatives

Total drama solutions offers a complete answer to versatile performance and maximum usage, combining workable space and usable product ideas with experience and expert service solutions, successfully bringing a project together, whilst continually adding value at every level.

CONSULTATION & DESIGN.

The initial part of the process discovers the requirements, considers the space, timescale and budget available and creates individual ideas. Developing the design to bring concept to reality, the project team of experts can use innovative products and utilise existing facilities to transform the use of any space.

INSTALLATION & PROJECT MANAGEMENT.

Professionally fitted to ensure the equipment is installed to meet all British Standard safety regulations, whilst overseeing the whole project to ensure timely development. Every element is carefully considered and controlled, with the set up of necessary equipment and precise positioning, for the very best in sound, light, vision and control.

TRAINING & MAINTENANCE.

Full training of how to use the new equipment and maintenance contracts continue beyond the life of the project illustrating the on-going support and full customer care from qualified individuals; adding value now and into the future.

sound & light kits

Individual portable products that simply enhance a production's sound or lighting capabilities, with easily controlled, portable, plug in and go systems.

Q-sound systems

Sound systems with integral features that offer comprehensive audio facilities.

System details – a portable, professional 250 watt system, combining an amplifier, mixing console and CD player, MP3/Ipod connection, pair of speakers, speaker stands, 4 microphones (2 handheld and 2 lapel mics) and all relevant cables together with a rack mounted flight case for compact storage.

Q-light kits

Portable lighting systems combining all the components for theatrical illumination.

Kit details – telescopic tripod, T-bar, 4 x par 56 lanterns, pack of coloured gels, spare lamp (bulb), dimmer control unit and all cables, storage flight case and an 8-way control desk for remote command of the lights. Capable of controlling 2 kits.

An alternative kit is available with fresnel or PC lanterns, which have a focused beam offering strong or soft lighting and follow spot options.

accessories

Additional microphones and speakers are available, or a lower specification, 150 watt speaker system with 2 handheld microphones.

Lighting extension kits with T-bar mounted or desk control can be added and linked to increase lighting, or be used independently. Other accessories including filters, lanterns and controls can also be added.

mission statement

To exceed customers' expectations, creating quality products and solutions designed for versatile use of space with fun and performance in mind.
